Subject: Multimedia 2
Teacher: Wol Pidriz

The development of a pre school educational tool is proposed. It will take the form of an electronic book. A prototype will be constructed using the first three letters of the alphabet to demonstrate the idea.

Using the features of Macromedia Studio MX, the user will be introduced to the letters of the alphabet.

- Animation and masks will be used to illustrate how to write each letter
- Sound will demonstrate how to pronounce each letter
- Simple graphics (bitmapped and vector) will show objects starting with a particular letter.
- Buttons will enable user control:
 - play a sound or instruction for a second time
 - navigate at will to other frames
- There may be an activity page (pending time constraints and skill level attained).
An activity would be positioned after a sequence of 3 letters to test the user's ability to recognise letters.

It is assumed the user will not be able to read. Written instructions will be kept to a minimum. Sound (spoken instructions matching written instruction) and animation will demonstrate how to use the site.
